### **DETAILED ACTION**

Claim 6 is new with Claims 1-6 pending in the application and claims 1 and 2 are withdrawn.

Claims 3-6 are pending examination as discussed below.

### ***Specification***

The amendment to the Abstract is accepted and entered.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 3-6 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent 6,258,480 (Moriwaki) as evidenced by US Patent 3,577,753 (Shah).

Moriwaki teaches a manufacturing method for a battery by preparing a material corresponding to the shape of the can and forming a cylindrical body by deforming. The sidewall thickness is subjected to press working to form a large thickness portion at the end portion and a small thickness. The press forming is done such that a distance between an outer circumferential surface of said large thickness portion and said central axis is equal to a distance between an outer circumferential surface of said small

thickness portion and said central axis, and a distance between an inner circumferential surface of said large thickness portion and said central axis is smaller than a distance between an inner circumferential surface of said small thickness portion and said central axis (Abstract; Figs. 1 & 2; 6:40-65). Shah provides evidence that the drawing and ironing process involves inserting a punch into a die to form the cup as taught by Moriwaki (1:5-60).

### ***Response to Arguments***

Applicant's arguments filed 9/4/07 have been fully considered but they are not persuasive.

Applicant argues unexpected results on page 7 of the arguments but has not provided any evidence to support such unexpected results.

Applicant argues "Moriwaki is silent on modifying a thickness by subjecting the sidewall to 'press working' as required by claim 3." However, applicant cites on page 7 of the arguments that Moriwaki teaches using a press to mold the cup and therefore subject the sidewall to 'press working'. Furthermore, as discussed above, Moriwaki teaches using a press with the drawing and ironing process and Shah provides evidence that 'press working' is part of the drawing and ironing process.

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
